CUTTING EDGE SOLUTIONS RELEASES FUTURE POS 5.0

BUTLER, PA, APRIL 17, 2009: Cutting Edge Solutions, the company that develops Future POS software, is ready to unveil Future POS 5.0. Future POS 5.0 will include added functionality such as Back Office Dashboards and customizable "Favorites" pages. The biggest change for the software has been the move from an older and less robust database to Microsoft SQL. According to John Giles, President and Lead Developer at Cutting Edge Solutions, "Previously you had to decide between using a product that had lots of features but ran on a proprietary database, or a product that uses Microsoft SQL but has limited functionality. With the release of Future POS 5.0, restaurateurs will finally have the best of both worlds."

The Dashboards and Favorites features will allow the point-of-sale users to access key information quickly depending on their needs. For example, a member of the wait staff can click view their own “favorites” page that can list pertinent information such as closing procedure link, payroll information, or daily special information. Managers and restaurant owners can use Favorites and dashboards to view important information in real time such as top selling items and sales related information for the day. Everything about the Dashboards and Favorites can be customized to fit the particular user’s needs.

The biggest change for Future POS is the move to Microsoft SQL. The goal of the development team at Cutting Edge Solutions was to take Future POS to the next level by combining all of the functionality of Future POS with a fast and reliable database in order to give users complete access to their data. Microsoft SQL is the industry standard therefore integration to third party applications is easier for the developers at Cutting Edge Solutions or outside developers.

Mr. Giles is very excited about the new features and the move to Microsoft SQL. According to Giles, “The move to SQL is just the beginning of bigger and better advancements for Future POS and our customers. We are all looking forward to working with our customers in order to make our great point-of-sale system even better!”
